This report provides readers with an overview of the Swiss insurance market in 2013. The report comprises four parts: the first part provides information about the market as a whole, while parts 2, 3 and 4 focus on the life, non-life and reinsurance sectors.

Information about the insurance market included in this report and the electronic tables have been provided by the insurers and verified by FINMA. FINMA, however, does not guarantee the accuracy of the figures.

1 Market overview

1.1 Number of institutions by sector

| | domio | surers ciled in erland | of f | nches oreign surers | | | Total |
|--|-------|------------------------------|-------------|---------------------------|--------------|-----|-------|
| | | At the | end of 2013 | 8 (at the e | end of 2012) | | |
| Life insurers | 19 | (19) | 4 | (4) | | 23 | (23) |
| Supplementary health insurers | 20 | (21) | 1 | (1) | | 21 | (22) |
| Non-life insurers | 60 | (60) | 43 | (41) | | 03 | (101) |
| Reinsurers | 28 | (27) | - | (-) | | 28 | (27) |
| Reinsurance captives | 34 | (34) | - | (-) | | 34 | (34) |
| Total number of insurers under supervision | 161 | (161) | 48 | (46) | | 209 | (207) |

Not included in the above table are general health insurers, of which there were 14 on 31 December 2013. They are supervised primarily by the Swiss Federal Office of Public Health (FOPH), but are also subject to FINMA supervision for their ICA (Insurance Contract Act) business (supplementary health insurance). Moreover, eight insurance groups (also not included in the above table) are subject to group supervision by FINMA. These are:

- Bâloise Holding AG
- Helvetia Holding AG
- Nationale Suisse
- Schweizerische Mobiliar Holding AG
- Swiss Life Holding
- Swiss Re AG
- Vaudoise Versicherungen Holding AG
- Zurich Insurance Group AG

1.2 Overview of balance sheets and income statements for the market as a whole

The figures in the following tables refer to all solo insurers operating in the life, non-life and reinsurance sectors. They have been prepared on a statutory basis, and any changes in the values of assets and liabilities generally do not correspond to market value adjustments. Most asset classes are shown at historical cost, e.g. equities are shown at their lowest historical values based on the lower of cost or market principle. Bonds are shown at amortised cost, which means the carrying values are not sensitive to interest rates. On the liabilities side, technical provisions for life insurers are discounted with technical interest rates and not with the prevailing market yield curve. Provisions for non-life insurers are generally undiscounted; specific exclusion is made here of accident insurance (UVG).

The aggregated information on the balance sheets and income statements, the Swiss Solvency Test (SST) and Solvency I contains only the values for solo insurers and as institutions are subject to FINMA supervision. The data on tied assets and premiums also includes the figures for FINMA-supervised Swiss branches of foreign insurers and general health insurers in the supplementary health insurance sector.

 $^{\rm 4}$ Including foreign branches in Sw itzerland and health insurance funds.

 $^{\rm 5}\,{\rm Based}$ on average investments held for own account.

⁶ Information provided by insurers. Any corrections made by FINMA are not included. The temporary adjustments (FINMA Circular 13/2) have been taken into account.

1.3 Investments

1.3.1 Total assets invested

The capital allocation shown in the tables represents total investments by insurers that are subject to FINMA supervision as institutions. Holdings in foreign subsidiaries are included in the parent company's structures. Investments by Swiss branches of foreign insurers and of general health insurers (supplementary health insurance), however, are not included.

Total investments by insurers increased compared with the previous year on a statutory basis. Investments on own account by life insurers increased by 3.4%. Non-life insurers grew by 3.6%. Compared with the previous year, capital allocation in the life and non-life sectors was again steady in 2013. Despite the low-interest environment, fixed-interest securities continue to be the most important asset class (61% of all investments on own account in life insurance; 40% in non-life insurance). Exposure in equities and alternative investments was virtually unchanged against the previous year and remains at very low levels. The share of real estate and mortgages in the portfolios of insurers (21% of total investments on own account in life insurance and 8% in non-life insurance) also remained unchanged. Investments by reinsurers dropped by 4.6% which can mainly be attributed to changes in exchange rates. Reinsurers' capital allocation was virtually unchanged against the previous year.

| | 31.12.2012 | 31.12.2013 |
|--|------------|------------|
| Return on investments for the whole market | 3.96% | 3.64% |
| Return on investments for life | 3.62% | 3.30% |
| Return on investments for non-life | 4.16% | 3.95% |
| Return on investments for reinsurance | 4.79% | 4.31% |

In 2013, the return on average allocated capital that life insurers achieved on own account was 3.3%, compared with 3.62% in the previous year. Property insurers reported return on investments that is 21 basis points lower (3.95%) compared with the previous year. The direct return on investments by life insurers remained virtually unchanged compared with the previous year. As in previous years, important contributions (86%) came from direct earnings in the asset classes "fixed-interest securities", "real estate" and "mortgages". In 2013, direct return on investments by non-life insurers was higher than in 2012. This effect is due to significantly higher direct earnings from holdings, following years in which direct earnings in this field were repeatedly in the negative domain. Return on investments benefited from realised profits, which were significantly higher than in previous years, in particular in the case of life insurers. In 2013, return on investments was influenced negatively through unrealized losses by life and non-life insurers. Unlike in the previous year, net book losses were posted for fixed-interest investments. Booked exchange rate differences also had an overall negative effect on return on investments for reinsurers fell 48 basis points to 4.31% which is attributable primarily to lower direct income from participations.

1.3.2 Investments in tied assets

Capital allocation in tied assets on 31 December 2012 and 31 December 2013 was as follows:

| | Life 31.12.2012 | Life 31.12.2013 | Non-life 31.12.2012 | Non-life 31.12.2013 |
|--|--------------------|--------------------|------------------------|------------------------|
| Real estate, buildings under construction and building land | 14% | 14% | 11% | 11% |
| Participations | 1% | 1% | 0% | 0% |
| Fixed-income securities | 62% | 62% | 57% | 56% |
| Loans and debt register claims | 3% | 3% | 2% | 2% |
| Mortgages | 9% | 9% | 6% | 6% |
| Equities and similar investments | 1% | 2% | 5% | 6% |
| Collective investments | 2% | 2% | 8% | 8% |
| Alternative investments | 2% | 2% | 2% | 2% |
| Net derivatives position | 0% | 1% | 0% | 0% |
| Time deposits and other money market investments | 1% | 0% | 1% | 2% |
| Receivables from reinsurance companies | 0% | 0% | 2% | 2% |
| Other investments | 1% | 2% | 1% | 1% |
| Liquid assets | 4% | 2% | 5% | 4% |
| Total investments for own account | 251,850,914 | 262,933,976 | 64,520,234 | 66,975,173 |

Swiss insurers held CHF 330 billion in tied assets in their portfolios (16 billion in investments in unitlinked life insurance) at the end of 2013.

Life insurers had 90% (1% above the previous year) of all investments aggregated across all insurers (86% of net assets; in the previous year: 85%) invested in tied assets at the end of 2013; in the case of non-life insurers, it was 49% (unchanged from the previous year) of investments (42% of net assets; unchanged). On 31 December 2013, life insurers had invested 85% (unchanged compared with the previous year) and non-life insurers had invested 73% (74% in the previous year) of their tied assets in the strongest asset classes "bonds", "real estate" and "mortgages".

⁴ Including foreign branches in Switzerland.

⁵ Based on average investments held for ow n account.

⁶ Information provided by insurers. Any corrections made by FINMA are not included.

The temporary adjustments (FINMA Circular 13/2) have been taken into account.

⁷ Available solvency margin includes eligible hidden reserves of CHF 9,658,442 (2012) and

12,025,249 (2013), and hybrid capital of 2,946,688 (2012) and 3,032,570 (2013).

The current economic situation poses enormous problems for life insurers. In general, their products come with very long maturities and guarantees and, in particular, interest rate guarantees. On the other hand, there were very few secure investment opportunities in 2013 – as was the case in previous years. For example, the yield on ten-year Confederation bonds has been declining for years and currently remains at historic low levels, a trend that also affected the SST quotients. On 1 January 2012, the average value of SST quotients of life insurers had dropped to 105%. By 1 January 2014, life insurers had managed to improve it to 153%. The improvement can be attributed

to measures aimed at increasing the capital and minimizing the risk, as well as to temporary adjustments (FINMA Circular 2013/2).

The assets life insurers use to cover liabilities arising from life insurance contracts must be secured in the form of tied assets, whereby the total target amount from such contracts, plus a safety margin of 1%, must be fully covered at all times. Meeting the obligations from insurance contracts takes precedence over any claims by third parties. Furthermore, in the case of investments in tied assets there are strict rules with respect to permitted asset classes as well as risk diversification and risk management. The cover ratios indicate that assets needed to cover the total target amount were on average 6% above the statutorily prescribed level at the end of 2013. This comes to CHF 15 billion for a target amount of CHF 264 billion in insurance obligations. The degree of security that the institution holding the tied assets offers – in connection with a strict principle of prudence for evaluating insurance obligations and a risk-based solvency regime – cannot be matched by other financial institutions in Switzerland.

2.1 Premium trends

| Gross premiums booked Figures in CHF 1000's | 2012 | 2013 | Per- centage share 2013 | Change in % since previous year |
|--|------------|------------|----------------------------------|--|
| Group life occupational pension schemes | 22,537,874 | 24,321,259 | 69.3% | 7.9% |
| Classical individual capital insurance | 4,393,368 | 4,497,053 | 12.8% | 2.4% |
| Classical individual annuity insurance | 673,663 | 559,900 | 1.6% | -16.9% |
| Unit-linked life insurance | 1,643,134 | 1,584,749 | 4.5% | -3.6% |
| Life insurance linked to internal investment positions | 985,811 | 816,173 | 2.3% | -17.2% |
| Capitalisation and tontines | 442,993 | 419,361 | 1.2% | -5.3% |
| Other life insurance segments | 448,949 | 448,642 | 1.3% | -0.1% |
| Individual life insurance not proratable on the branches | - | - | - | - |
| Health and casualty insurance | 6,578 | 5,893 | 0.0% | -10.4% |
| Foreign branches | 2,002,087 | 1,962,847 | 5.6% | -2.0% |
| Reinsurance accepted | 349,143 | 499,968 | 1.4% | 43.2% |
| Total | 33,483,601 | 35,115,846 | 100.0% | 4.9% |

On the whole, the premium income of life insurers increased by CHF 1,632 million (previous year: CHF 724 million) or 4.9%, which is attributed primarily to group insurance in the occupational pensions sector (an increase of CHF 1,783 million compared with the previous year). While classical individual endowment insurance and assumed reinsurance also showed minor growth, all other sectors experienced a decline.

Premium volume in group contracts of occupational pensions as a share of total business volume (2013: 69.3%; 2012 and 2011: 67.3%; 2010: 63.5%; 2009: 61.4%) remains at a historic high level. This underscores the great importance of Pillar 2 not only for Swiss life insurers but also for small and medium-sized enterprises (SMEs), which are generating demand for risk-proof full value insurance models in the occupational pensions sector. Life insurers thus operate in a strongly regulated and politically sensitive field of social insurance. Based on its statutory mandate, FINMA's activities must ensure that these pension assets are fully protected.

Distribution of life insurance policies in the private pensions sector (Pillars 3a and 3b) has declined enormously in all product categories. The reason for this is low interest rates, which have declined by over 250 basis points since 2008 and continue to remain at low levels. Although life insurers are attempting to counter this trend by launching innovative savings products, they have not been entirely successful because they first and foremost have to protect the assets they hold.

| Insurer | 20 | 12 | 2013 | | |
|----------------------|--------------|-------------------------|--------------|-------------------------|--|
| | Market share | Cumulative market share | Market share | Cumulative market share | |
| AXA Life | 28.9% | 28.9% | 30.1% | 30.1% | |
| Swiss Life | 25.2% | 54.1% | 26.3% | 56.5% | |
| Helvetia Leben | 10.2% | 64.3% | 10.9% | 67.4% | |
| Basler Leben | 8.3% | 72.6% | 9.2% | 76.7% | |
| Allianz Suisse Leben | 7.4% | 80.0% | 6.0% | 82.7% | |
| Zürich Leben | 6.7% | 86.6% | 5.2% | 87.9% | |

2.2 Market shares in direct Swiss business

The six market leaders expanded in different directions in the direct Swiss business. While the four largest ones managed to grow their market shares by 4%, the two smaller ones jointly lost around 3%. The other smaller life insurers made up the remaining portion of 12% (2011 and 2012: 13%; 2010: 17%).

2.3 Actuarial reserves

| Gross actuarial reserves Figures in CHF 1000's | 2012 | 2013 | | Change in % since pre- vious year |
|--|-------------|-------------|--------|---|
| Group life occupational pension schemes | 132,534,790 | 139,858,153 | 55.2% | 5.5% |
| Classical individual capital insurance | 50,730,470 | 50,691,092 | 20.0% | -0.1% |
| Classical individual annuity insurance | 19,096,662 | 18,498,375 | 7.3% | -3.1% |
| Unit-linked life insurance | 14,290,141 | 14,698,741 | 5.8% | 2.9% |
| Life insurance linked to internal investment positions | 4,652,588 | 4,900,468 | 1.9% | 5.3% |
| Capitalisation and tontines | 1,518,586 | 1,906,909 | 0.8% | 25.6% |

Actuarial reserves refer to a valuation of insurance obligations for each insured person individually and are based on conservative accounting standards. It must be recognised as the main component of underwriting liabilities when preparing the balance sheet and establishing tied assets (2013: CHF 280 billion; 2012: CHF 271 billion; 2011: 260 billion).

Total actuarial reserves of all insurance sectors in 2013 indicate growth of 3.3% (3.7% in previous year), taking into account the continuing challenging market conditions.

The decline (2012: CHF 1 billion; 2011: CHF 1.4 billion) in actuarial reserves in classical individual life insurance (primarily lump sum, pension and disability insurance) ended at a low level. The acquisition of new funds and the resulting growth in actuarial reserves thus remains very modest for as long as interest rates remain at their current low levels. The need to increase actuarial reserves in the classical individual life insurance sector was satisfied in 2013 (Section 2.4).

Although the continuing rise in stock markets led to a further increase in actuarial reserves of current unit-linked life insurance in 2013, the rate of growth was nevertheless modest compared with the previous year (+2.9% for unit-linked life insurance; +5.3% for life insurance linked to internal investment positions). Capitalisation business again increased significantly by 26%. This was largely because high net-worth individuals were asking for insurance products as a means of protecting their assets.

In reporting year 2013, life insurers achieved a clearly better result on a statutory basis compared with the previous year. While the result for the occupational pensions sector was similar to that of previous years, private pensions (Pillars 3a and 3b) and life insurance in general made noticeable improvements. Underwriting income, claims paid out and expenses for insurance operations, however, did not change significantly, and return on capital even declined by 15%. The clearly improved result can be solely attributed to a sharp reduction in funds allocated to technical provisions. This effect is primarily

due to declining interest rates in previous years, resulting in a need to increase technical provisions because the underlying interest rates for calculating them had to be lowered. In the previous year, this process reached a noticeable saturation point, partially due to the slight decline in interest levels.

In 2013, the amounts paid out in insurance claims increased by 7.8% to CHF 29.5 billion. This trend was absorbed entirely by the group insurance business of Pillar 2. Underwriting income increased by 4.8% to CHF 34.8 billion, mostly from premium income from the group business of Pillar 2, which makes up 70% of the life insurance business. Low interest rates led to only modest growth in the classical life insurance sector. The most significant classical life insurance categories are endowment and annuity insurance. In the case of endowment insurance, the insurer guarantees the lump sum plus the interest due on death or maturity at a contractually agreed rate. In the case of annuity insurance, the insurer guarantees the contractually agreed pension until the person's death. The remaining business, too, did not show any positive changes worth mentioning, while the foreign business even declined.

After technical provisions required substantial support following the strong decline in interest levels in 2012, the need for additional funding had reached a clear saturation point on account of slight shifts in interest levels (-22% on CHF 9.5 billion) in 2013. However and as previously mentioned, this saturation was mostly derived from classical life insurance in the private pensions sector. In the group occupational pensions business, the statutorily prescribed conversion rates for future retirements that will remain in effect for years to come, plus the large portfolio of current pensions, will continue to cause a controversial need for additional funding. Furthermore, strong growth in this insurance sector since 2008 has created a need for additional reserves to be formed.

Investment income has declined considerably. It amounted to CHF 10.5 billion (previous year CHF 11.6 billion), which comes to a book yield of (held at own risk) of 3.30% (2012: 3.62%). The book yield provides the basis for calculating surplus participation, which can be expected only on policies for which the guaranteed technical interest is significantly below the book yield.

Flow statistics for accumulated surplus funds of life insurers are as follows (in CHF billions):

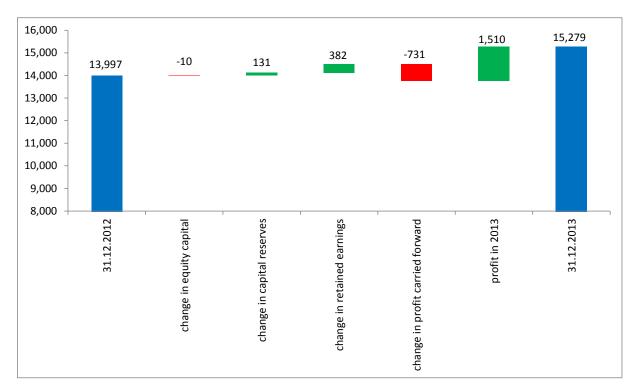

| At the beginning of 2008 | 5.00 |
|--|-------|
| Surplus participation to insured parties | -1.50 |
| Allocation to surplus fund from the income statement | +0.60 |
| Cover for operating deficit | -0.10 |
| Equalisation of currency differences | -0.20 |
| At the end of 2008 | 3.80 |
| Surplus participation to insured parties | -1.06 |
| Allocation to surplus fund from the income statement | +1.39 |
| Equalisation of currency differences | -0.02 |
| At the end of 2009 | 4.11 |
| Surplus participation to insured parties | -1.39 |
| Allocation to surplus fund from the income statement | +1.35 |
| Equalisation of currency differences | -0.19 |
| At the end of 2010 | 3.88 |
| Surplus participation to insured parties | -1.39 |
| Allocation to surplus fund from the income statement | +1.50 |
| Equalisation of currency differences | -0.03 |
| At the end of 2011 | 3.96 |
| Surplus participation to insured parties | -1.30 |
| Allocation to surplus fund from the income statement | +1.17 |
| Equalisation of currency differences | _ |
| At the end of 2012 | 3.83 |
| Surplus participation to insured parties | -1.42 |
| Allocation to surplus fund from the income statement | +1.23 |
| Equalisation of currency differences | +0.01 |
| | |

The trend of the cumulated surplus fund since 2008 clearly demonstrates the equalising function of the fund as an actuarial balance sheet position: Amounts allocated to policyholders in 2008, the year of the financial crisis, exceeded the amounts allocated from the income statement. In 2009, the opposite

applies as markets had somewhat recovered. The following years saw a more balanced situation. Because of the decline in market interest rates in 2012, subsequent allocations from the income statement were lower than in the previous year. This led to a slight decline in the level of the cumulated surplus fund, a situation that is likely to continue for as long as low interest rates prevail.

2.5 Changes in equity

Changes in equity in 2013 in CHF million

The financial year 2013 was marked by a moderate rise in interest rates from historic low levels. After the interest rate for ten-year Swiss medium-term notes lost 244 basis points between 2008 and 2012 (from 3.04% at the beginning of 2008 to 0.6% at the beginning of 2013), it gained 65 basis points in 2013, ending at 1.25%. Interest rate trends are very important for life insurers because 60% of their investments are in fixed-interest securities. The moderate rise in interest rates had no effect on investment income because a part of earlier gains from securities with higher interest rates had to be redistributed to the part with lower interest rates on account of maturities, or sold for the purpose of realising hidden reserves. Nevertheless, life insurers produced a good annual result in 2013 (cumulated CHF 1,509 million). The annual result was approx. 50% above that of the previous year. The reason for this was the improved underwriting income, which managed to more than compensate the reduced investment income compared with 2012. The good annual result enabled life insurers to strengthen their equity base (by cumulated CHF 1,262 million, from CHF 14 billion to CHF 15.3 billion).

³ Including foreign branches in Sw itzerland and health insurance funds.

⁴ Based on average investments held for own account.

⁵ Information provided by insurance companies. Any corrections made by FINMA are not included. The temporary adjustments (FINMA Circular 13/2) have been taken into account. The general health insurer SWICA is also included.

Non-life insurers made clear progress in their operations in 2013. The combined ratio declined by 4.7% to 81.3% against the previous year. This improvement was achieved primarily through a smaller loss ratio (minus 3.8%) on account of higher earned gross premiums (plus 3.9%) and a decline in reserved gross claims (minus 1.9%).

Booked gross premiums of overall business increased by 2.9% in 2013, ultimately amounting to CHF 51.3 billion. The increase in premiums was mainly generated by the indirect business.

3.1 Premium trends in Swiss business

Gross premiums booked in Swiss direct business (in CHF 1,000), excluding reinsurance business assumed:

| Direct business | Gross premiums booked | | Percentage share 2013 | Change in % since pre- |
|-------------------------------|-----------------------|------------|--------------------------|---------------------------|
| Figures in CHF 1000's | 2012 | 2013 | Silare 2013 | vious year |
| Health | 9,239,019 | 9,667,201 | 36.9% | 2.2% |
| Fire/property | 3,990,045 | 4,111,219 | 15.7% | -0.6% |
| Accident | 2,964,433 | 2,929,986 | 11.2% | -1.8% |
| Motor vehicle (comprehensive) | 2,824,663 | 3,028,758 | 11.6% | 3.3% |
| Motor vehicle (liability) | 2,686,462 | 2,742,721 | 10.5% | 0.8% |
| Liability | 1,903,820 | 1,948,444 | 7.4% | 1.7% |
| Marine, aviation, transport | 427,434 | 432,465 | 1.7% | -3.2% |
| Legal expenses | 438,664 | 492,193 | 1.9% | 6.1% |
| Financial losses | 330,307 | 335,470 | 1.3% | 1.8% |
| Credit, surety | 283,920 | 310,909 | 1.2% | 2.7% |
| Tourist assistance | 193,906 | 206,523 | 0.8% | 4.4% |
| Total direct insurance | 25,282,674 | 26,205,890 | 100.0% | 1.2% |

Premium growth in 2013 amounted to 1.2% (previous year: 2.4%). As in the previous year, the increase in health insurance (plus 2.2%) was attributed to premium adjustments. The light decline in the "Fire, property damage" sector must be seen in connection with price pressures in the industrial business and buildings insurance business. The decline in "accident" insurance is due to the competitive environment of this high-volume sector.

The rising number of vehicles and the associated share of new vehicles are the driving forces in the "Motor vehicle (comprehensive)" and "Motor vehicle (liability) insurance. The growth rates, however, were more moderate compared with previous years.

The continuous growth in the "Legal protection" insurance sector is the result of changed consumer behaviour in the field of legal expenses insurance. Disputes are increasingly being brought to court, and they are thus driving demand for legal protection policies.

In view of the continued positive economic data, a growth trend with respect to volume could be observed in the "financial losses", "credit/surety", and "tourist assistance" insurance sectors in 2013, the same as in previous years.

3.2 Market shares in direct Swiss business

| Insurer | Market share in % | Cumulative market share in % | Market share in % | Cumulative market share in % |
|-------------------------|----------------------|------------------------------------|----------------------|------------------------------------|
| | 2012 | 2012 | 2013 | 2013 |
| AXA Versicherungen | 18.8% | 18.8% | 18.7% | 18.7% |
| Zürich Versicherungen | 15.2% | 34.0% | 15.0% | 33.7% |
| Schweizerische Mobiliar | 13.7% | 47.7% | 14.2% | 47.9% |
| Allianz Suisse | 10.2% | 57.9% | 10.2% | 58.1% |
| Basler | 7.6% | 65.5% | 7.6% | 65.7% |
| Generali Assurances | 4.6% | 70.1% | 4.7% | 70.4% |
| Helvetia | 4.6% | 74.7% | 4.6% | 75.0% |
| Vaudoise | 4.2% | 78.9% | 4.3% | 79.3% |
| Schweizerische National | 4.1% | 83.0% | 4.1% | 83.4% |

Non-life insurers' market shares (excluding the health insurance business)

The ranking of market shares in the direct Swiss business remained unchanged compared with the previous year. Swiss Mobiliar could increase its market share by 0.5%. The strong market concentration reflected also in market shares of the nine major non-life insurers. Cumulated market share of 83.4% was slightly above that of previous year.

3.3 Loss ratios for Swiss business

Loss ratios for direct Swiss business

| Direct business | Loss ratio | Loss ratio |
|-------------------------------|------------|------------|
| | 2012 | 2013 |
| Health | 71.1% | 71.6% |
| Fire/property | 50.4% | 48.9% |
| Accident | 61.9% | 72.8% |
| Motor vehicle (liability) | 73.5% | 77.0% |
| Motor vehicle (comprehensive) | 37.6% | 35.5% |
| Liability | 38.5% | 47.8% |
| Marine, aviation, transport | 49.1% | 46.1% |
| Legal expenses | 49.7% | 50.0% |
| Financial losses | 64.2% | 34.6% |
| Credit, surety | 43.8% | 24.3% |
| Tourist assistance | 71.9% | 70.9% |
| Total | 60.0% | 61.4% |

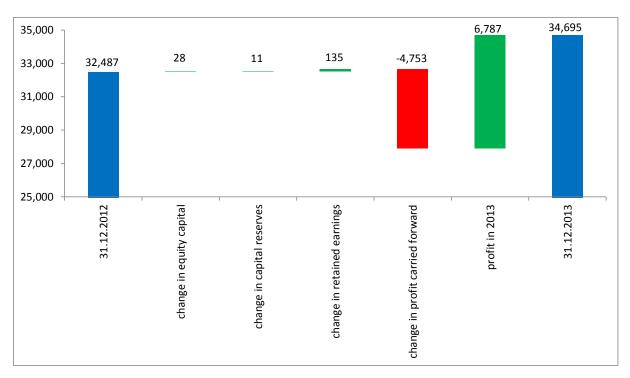

The claims ratios in the direct Swiss business indicated a trend reversal and was higher across all sectors, unlike in previous years. The higher claims ratio in the "accident" sector can be attributed to higher claims payments (plus 5.7%) and lower gross premiums (minus 1.8%). Higher claims payments were due to an increase in the number of accidents (plus 3.2%) and to wage trends. In the "Motor vehicle (comprehensive)" sector, the increased claims ratio was on the one hand the result of the hail storms in the spring of 2013; on the other hand, it was caused by an increase in loss reserves and by higher repair costs resulting from technically more complex vehicles.

In the "liability" sector, claims payments decreased by 5.7%. This decline was more than compensated on account of large shifts in technical provisions, resulting in a 9.3% higher claims ratio.

The improved claims ratio in the "Fire, property damage" sector is due to the fact that fewer large claims from natural hazards were filed compared with the previous year. In the "Motor vehicle (liability)" sector, a steady decline in the number of road traffic accidents with serious and light injuries can be observed, which is having a positive effect on the claims ratio. The reasons for the decline in traffic accidents are additional safety measures and improved passive safety features in vehicles. The decline in the claims ratio in the "Financial losses" and "Credit, surety" sectors can be attributed to positive claims handling procedures.

3.4 Changes in equity

Changes in equity in CHF million in 2013

Equity (prior to appropriation of profits) of Swiss non-life insurers increased by 6.8% to CHF 34.7 billion in 2013. This trend is primarily due to an increase in annual return (plus CHF 1.5 billion, or plus 29%).

3.5 Supplementary health insurers

The data on supplementary health insurers in the tables below are also provided for non-life insurers in the respective tables. The tables contain the aggregated data of all institutions supervised by FINMA that do business solely in accordance with the Insurance Contract Act (ICA) and are active primarily in the "health" sector. On 31 December 2013, there were 21 insurers in this field. To understand the market better, the values shown under premiums and tied assets also include health insurance funds in the supplementary health insurance sector. When including the daily benefits business of the remaining property and life insurers whose core business does not include health insurance, total gross premiums of the supplementary health insurance business supervised by FINMA come to CHF 9.7 billion (previous year: CHF 9.5 billion).

³ Based on average capital held for ow n account.

⁴ Information provided by insurers. Corrections made by FINMA not included.

The temporary adjustments (FINMA Circular 13/2) have been taken into account.

The financial position of reinsurers remained mostly stable in 2013. Underwriting performance was nonetheless mixed: while non-life reinsurance improved, there was a substantial decline in life reinsurance attributable to the strengthening of provisions and a reinsurer's new intra-group retrocession cover. Annual profits went down from CHF 4.7 billion to CHF 4.1 billion.

4.1 Premium trends

Premiums earned by combined lines of business according to region (in CHF thousands):

| Premiums earned (values in CHF1,000's) | 2012 | 2013 | Percentage share 2013 | Change in % since previous year |
|---|------------|------------|--------------------------|---------------------------------------|
| Short-tail | 9,728,934 | 11,624,164 | 41.2 | 19.5 |
| Long-tail | 5,625,842 | 7,143,795 | 25.3 | 27.0 |
| Catastrophes | 2,711,947 | 3,069,855 | 10.9 | 13.2 |
| Total non-life | 18,066,723 | 21,837,815 | 77.4 | 20.9 |
| Life | 8,457,158 | 6,388,502 | 22.6 | -24.5 |
| Total net premiums | 26,523,881 | 28,226,317 | 100.0 | 6.4 |
| | | | | |
| Asia / Pacific | 8,299,552 | 8,834,014 | 31.3 | 6.4 |
| Europe | 8,113,083 | 9,396,115 | 33.3 | 15.8 |
| North America | 9,022,473 | 8,764,256 | 31.0 | -2.9 |
| Rest of the world | 1,088,774 | 1,231,932 | 4.4 | 13.1 |
| Total net premiums | 26,523,881 | 28,226,317 | 100.0 | 6.4 |

Long-tail: liability lines and accident; short-tail: other non-life lines of business excluding catastrophes.

The net premiums earned for own account rose in 2013 by 6.4%. The long tail lines of business in particular recorded strong growth (plus 27%). On the other hand, however, life reinsurance fell significantly (minus 24.5%) primarily due to a positive one-time impact in the previous year (takeover of portfolios).

4.2 Loss ratios

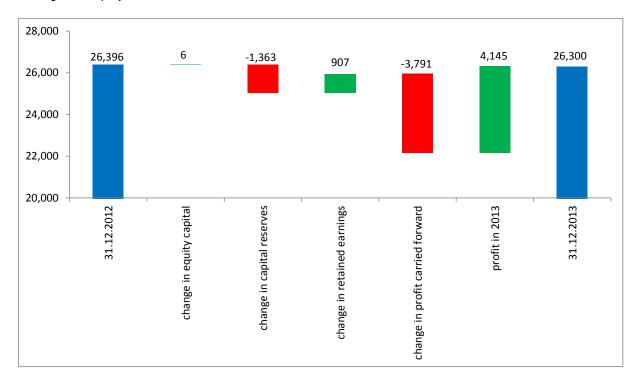

Loss ratios non-life (in percentage):

| Combined line of business | 2012 | 2013 |
|---------------------------|------|------|
| Short-tail | 62.3 | 56.7 |
| Long-tail | 68.5 | 65.8 |
| Natural disasters | 44.4 | 29.5 |
| Total | 61.5 | 55.9 |

The loss ratio dropped overall from 61.5% to 55.9%, in particular owing to a very low loss ratio of 29.5% in the natural disasters business. The scale of natural disasters in 2013 was lower. Moreover, provisions for events for previous years could be written back. Loss ratios in the other lines of business were also positively influenced by run-off gains.

4.3 Changes in equity

Changes in equity in 2013 in CHF million

Regulatory capital only changed slightly in 2013. The annual profits earned and the distributions (partly from capital reserves) largely offset each other. Some reinsurers, however, made distributions that considerably exceeded their annual profits and thus served to return surplus capital to the shareholders.
